A.C.E. Production Technologies Celebrates 30% Growth This Year

Spokane, Washington, USA – A.C.E. Production Technologies, a leading supplier of innovative, affordable selective soldering systems and complementary technologies, has seen another record year of 30% growth, particularly in the areas of advanced product R&D, technical and production staff, and marked increases in sales revenue.

In making the announcement, Alan Cable, President and CEO, said "Our investment in people, new product development and focus on global sales has resulted in another year of steady growth. In 2008, we focused on developing and introducing systems with added functionality and more automation to the market. This brought us increased sales volume and revenue. A number of our customers now purchase multiple in-line machines, combined with in-line fluxing, pre-heating and handling. In the past, sales were primarily of our highly cost-effective stand-alone systems."

ACE Production Technologies is a designer and builder of simple, affordable selective soldering systems suitable for lead-free electronics assembly. ACE's line of rugged, reliable selective soldering systems includes the KISS 101, KISS-102, KISS-103, and the KISS-104 models. All of these flexible systems feature lead-free compatible solder pots and are ideal for low to medium volume assembly, prototyping, and rework, post-reflow offline assembly, and other soldering applications such as odd-form devices. For more information about A.C.E., including sales and technical, contact ACE Production Technologies, INC., 3010 N. Industrial Park, 1st Street, Spokane Valley, WA 99216; Tel. 509-924-4898, e-mail sales@ace-protech.com; www.ace-protech.com.
